

Software development for start-up entrepreneurs, Ralf Lämmel

Assignment 3: DHL Delivery App by Sven Beisecker and Simon Wolff

On the following links you are going to find the applications developed to initialize our start-up idea:

- 1.) DHL App – Customer: <http://tdev.ly/mpric>
- 2.) DHL App – DriverPresentation: <http://tdev.ly/igona>
- 3.) DHL App – DriverReal: <http://tdev.ly/kxofc>

The third app constitutes the version that would typically be used by the DHL delivery man in practice, since here the distance between driver and customer is calculated constantly to keep track of the driver's constant change of location. For the presentation, however, the second app is more useful, given that we have no real-time data of a delivery man actually driving around and thus changing his position constantly.

Feel free to search for the apps on Touchdevelop under the indicated names so that you can get access to the code.
